SEQOUIA POLL: WHAT'S YOUR FAVORITE PLANET?

"I think Neptune is pretty because of the blue." - Faith Blackburn

"Venus because its' atmosphere is the most unique out of the three." - Deinelle

"Mars is the only chance we have at survival." -Kian De Guzman

Do you think will be able to visit mars by 2040?

I don't think we will make it to by 2040 as they always say we will. Nothing happens; the most we've done is send a robot to explore it. Based off what's happened, it will most likely not occur. Our technology is barely advanced enough to live there as we would have to send over all the materials to build the places to stay on Mars. We would also need the gear to stay on Mars, making it obvious that will we probably not be on Mars by 2040
